

## Technology Area

DEFINITION			
<i>Name</i>	Contingency Planning		
<i>Description</i>	Contingency planning establishes plans, procedures, and technical measures that can enable a system to be recovered quickly and effectively following a service disruption or disaster. Interim measures may include the relocation of systems and operations to an alternate site, the recovery of functions using alternate equipment, or the performance of functions using manual methods.		
<i>Rationale</i>	<p>Information systems are vital elements in most state business processes. State agencies must have contingency plans in place to ensure that critical operations can be continued during any disruption and resume normal operations within a reasonable period.</p> <p>As the mission and nature of each state agency differs considerably, they must tailor their contingency plans to address their specific risks. However, the format and contents should be compatible with and support the state's contingency plan.</p>		
<i>Benefits</i>	<ul style="list-style-type: none"> <li>• Provides an efficient approach for agencies to develop policies and procedures for the timely recovery and restoration of critical processes and vital services to the citizens.</li> <li>• Maximizes the state's response, resumption, recovery, and restoration operations.</li> <li>• Minimizes the inconvenience to customers and clients when non-essential services are lost.</li> </ul>
