

Single Feasible Source Purchase

Title: Pharmacist Service Expansion (PSE) Project

Description: The PSE Project focus includes (1) assuring on-going collaboration and expert consultation for MAP pharmacist projects – including CHC-PI; (2) building pharmacist’s awareness and participation in providing patient education adherence and patient self-management interventions; (3) increasing the number of Missouri pharmacists certified to provide Medication Management Services for, among other diagnoses, elevated blood pressure and hemoglobin A1c, and increase the number of pharmacists completing Diabetes Accreditation Standards – Practical Applications (DASPA) training that is the national recognized pharmacists training to provide patients with diabetic self-management education; and (4) increasing sustainability of the pharmacist’s medication intervention services by providing an experienced expert to provide information and hands-on training about third-party reimbursement from Medicaid, Medicare, and/or other insurance.

Since the Missouri Pharmacy Association is the only entity with statewide reach to facilitate the PSE, the Missouri Pharmacy Association is the only feasible source to provide the services listed above.
