

Single Feasible Source Purchase

Title: HazMat IQ Training

Description: The HazMat IQ Training course is a 4-step training course and tool that incorporates a series of easy to understand and copyrighted “smart charts” that act as job aids. These job aids enable responders to quickly assess risks and make proper decisions on how to best mitigate a hazardous materials incident. The HazMat IQ 4-Step system consists of:

Step 1) Revolutionary 10 – second “Above the line – Below the line” chemical size up.

Step 2) Streamlined chemical research process.

Step 3) Choose the appropriate meter(s) and protective equipment.

Step 4) Operate safely in the hot zone based on mission.

Additionally, equipment (SAFe kits) has been designed to ensure responders are protected in the hot zone of a hazardous materials incident, including customer selected LEL/O2 meters, pH paper, fluorine paper, temperature gun, radiation detector, and HazMatIQ charts.

The organization listed below is considered a single feasible source because the HazMat 4-step training course and SAFe kits are proprietary and available exclusively from Federal Resources and because the HazMat IQ Training course from Federal Resources was named in the grant application.

Contract Period: October 1, 2014 through September 30, 2015
