

## Technology Area

### DEFINITION

<i>Name</i>	Security Risk Management
<i>Description</i>	<p>Security Risk Management is a three-step process of assessment, testing and mitigation. This allows agency managers to balance the operational and economic costs of protective measures and achieve gains in mission capability by protecting the agency systems and data that support their mission.</p> <p>Risk assessment includes identification and evaluation of risks, risk impacts, and recommendations for risk-reducing measures.</p> <p>Security testing identifies vulnerabilities and allows agencies the opportunity to mitigate them before they are exploited.</p> <p>Risk mitigation refers to prioritizing, implementing, and maintaining the appropriate risk-reducing measures recommended from the risk assessment process.</p> <p>Risk management is ongoing and evolving, which emphasizes the need for continuing risk evaluations and assessments. The system owner determines whether the remaining risk is at an acceptable level or whether additional security controls should be implemented.</p>
<i>Rationale</i>	Security Risk Management ensures that appropriate, cost-effective safeguards are incorporated into existing and new installations of agency systems.
<i>Benefits</i>	Security Risk Management helps to ensure the balance of risks, vulnerabilities, threats, countermeasures, and available resources to achieve an acceptable risk level based on the sensitivity or criticality of the individual systems.

### ASSOCIATED ARCHITECTURE LEVELS

<i>List the Domain Name</i>	Security
<i>List the Discipline Name</i>	Management Controls

### Associated Compliance Components
